Netography Fusion®

Frictionless Security Observability for All Your Multi-Cloud and Hybrid Environments

"

In the end, we achieved complete visibility and better security detections across all of our environments - including on-premises and multi-cloud, Netography Fusion ingests and enriches flow data at massive scale without hardware, complicated network taps in chokepoints, or costly deep packet inspection and decryption.

Shannon Ryan, Senior Director, Core Security Services and Architecture, FICO

Netography Fusion® detects activity that should never happen anywhere in your modern network, in real-time. Fusion is a security observability platform designed to deliver a very low number of high-fidelity, high-confidence alerts that your security, network, and cloud operations teams can act on. It is a 100% SaaS platform that drives unmatched real-time awareness without the burden of deploying sensors, agents, or taps. With Fusion you can:

- Close Your Visibility Gaps: Know what your users, applications, data, and devices are doing and what's happening to them across your multi-cloud and hybrid environments.

- Accelerate Your Response to Compromises and Anomalies: Detect and respond in real-time before threat actors disrupt operations or misconfigurations spike costs or result in compliance issues in any size environment.

- Initiate Incident Investigation & Threat Hunting: Map the scope and impact of any incident with comprehensive observability of East/West and North/South activity; conduct forensic analysis with context-rich historical data.

Simplify Your Network Security and Observability at Scale

Fusion aggregates and normalizes metadata collected from your multi-cloud and hybrid infrastructure and enriches it with context from your tech stack. Its AI-driven analytics generate high-confidence alerts when it detects unwanted activity that your platform-specific tools and legacy detection and monitoring technologies can't see. The result is a unified set of capabilities to deliver observability-driven security across your entire multi-cloud, hybrid enterprise.
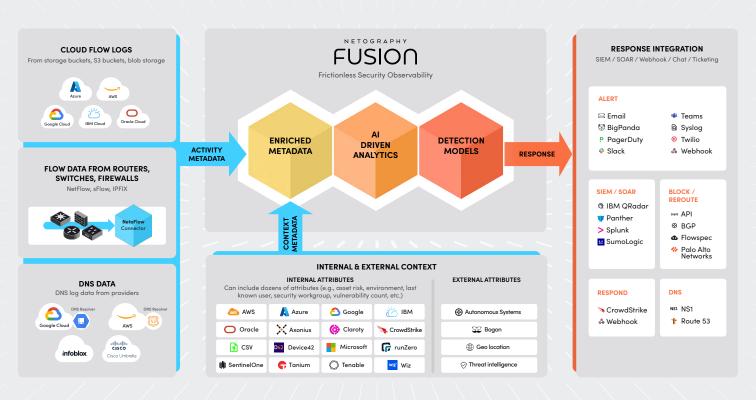

Real-time detection of anomalous and malicious activity enables you to respond faster and significantly reduce risks to business continuity.

Frictionless Security at Any Scale

You can defend any size network with Fusion's unlimited scalability. Fusion eliminates the need to deploy obsolete architectures comprised of sensors, taps, and agents. Its 100% SaaS architecture leverages your existing tech stack, significantly lowering TCO and accelerating your time-to-value.

Reduce Alert Overload and Respond Faster

Fusion's AI-driven analytics and customizable detections eliminate the massive volume of undifferentiated alerts that flood your operations teams. It delivers high-fidelity, high-confidence alerts in real-time that speed response to anomalies and compromises.

Netography Fusion delivers unmatched visibility of network activity across users, applications, data, and devices.

Value of Context-Enriched Metadata

Context-enriched metadata accelerates your ability to respond to activity that other controls have missed, such as anomalous East/West activity. The context attributes ingested from your tech stack convert endless tables of IP addresses and ports into context-rich visualizations and alerts that reduce your time to respond and empower your operational teams. You will be able to understand the significance of the behavior immediately, without having to access additional tools or teams.
